

WLTF – The IWA Water Loss Task force

Specialist Group
Efficient Operation
and Management
Water Loss Task Force

The IWA Water Loss Task force is one of the Task Forces of the highly respected and very active **IWA Efficient Operation and Management Specialist Group (EOM SG)**.

Following the successful IWA Leakage Management Conference - "A Practical Approach" held in Cyprus, the IWA Water Loss Task Force held a meeting which attracted 36 participants from 17 countries, and 5 continents around the world. Today, we have about 100 members from more than 30 countries contributing to the Task Force.

The Task Force develops and promotes international best-practices in water loss management. This includes the initiation of (and the participation in) research projects to keep at the forefront of new developments.

On the other hand, one of the most important aspects of the Task Force is to provide guidance and assistance to water utilities which do not yet have appropriate water loss management policies in place.
